                          The invention relates to an isolated mammalian anti-dual integrin CC antibody having at least one of the human heavy chain or light chain CC complementary determining region (CDR, HC CDR). Also CC included are the nucleic acids encoding the CDRs, a vector comprising the CC nucleic acids, a host cell comprising the vector, an anti-idiotype CC antibody that binds to the ant-dual integrin, a medical device comprising CC intramuscular, intravenous, intrarticular, intrabronchial, contracepsular, intracapsular, integrin related condition in CC is useful for diagnosing or treating a dual integrin related condition in CC an animal for example, immune related disease such as rheumatoid CC arthritis, gastric ulcer, asthma, allergic rininits, Crohn's pathology, CC sitle cell anaemia, diabetes, cardiovascular disease such as bacterial, CC disease such as leukaemia, ethonics, instensis, angina pectoris, CC wyocardial infarction, infectious disease in a cell such as bacterial, CC viral, and fungal infections, pneumonia, leprosy, malaria, malignant CC laterosis, Parkinson's disease, spinal ataxia, Alzheimer's disease, CC creutzfeldt-lakeh disease, appinal ataxia, Alzheimer's disease, or the risker of the process of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         98

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SSSS
The invention relates to an isolated mammalian anti-dual integrin cantibody having at least one of the human heavy chain or light chain complementary determining region (CDR, HC CDR1-CDR3, LC CDR1-3). Also included are the nucleic acids encoding the CDRs, a vector comprising the nucleic acids, a host cell comprising the vector, an anti-idiotype antibody that binds to the ant-dual integrin, a medical device comprising the antibody suitable for administration by parenteral, subcutaneous, intrambuscular, intracepsular, intractibility intracepsular, intracepture, intracepture, intracepture, intracepture, intracepture, intracepture, intracepture, intracepture, intracepture, intracepture, intracepture, intracepture, intracepture, intracepture, intracepture, intracepture, intracepture, intracepture, intracepture, intracepture, intracepture, as a given in specification. The antibody is useful for diagnosing or treating a dual integrin related condition in an animal for example, immune related disease such as rheumatoid arthritis, gastric ulcer, asthma, allergic rhinitis, Crohn's pathology, cardiovascular disease such as pathology, arteriosclerosis, atherosclerosis, restenosis, angina pectoris, myocardial infarction, infectious disease in a cell such as bacterial.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          viral, and fungal infections, pneumonia, leprosy, malaria; malignant disease such as leukaemia, chronic myelocytic leukaemia, Burkitt's lymphoma, multiple myeloma; neurological disease such as multiple sclerosis, Parkinson's disease, spinal ataxia, Alzheimer's disease, Creutfeldt-Jakob disease and many other disease given in the specification. The present sequence is an anti-dual integrin human variable region containing at least one of the six CDRs listed above (AAU76327-AAU76332)
This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiALDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    BLys; B lymphocyte stimulator; TNF superfamily; human; cytostatic; tumour necrosis factor; B cell proliferation; B cell differentiation; immunosuppressive; immunostimulant; immunomodulatory; antirheumatic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Homo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   systemic lupus erythematosus; rheumatoid arthritis; CVID; AIDS; common variable immunodeficiency; acquired immunodeficiency syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                              diagnosis
                                                                                                                                                                                                                                                                                                                                                                                 Antibodies against B Lymphocyte Stimulating polypeptides, useful for the diagnosis and treatment of cancers and immune disorders.

to B lymphocyte stimulator (BLyS). The BLyS gene has been mapped to chromosome 13q34 and encodes a protein that is a member of the tumour necrosis factor superfamily and induces both in vivo and in vitro B cell proliferation and differentiation. Specifically, it refers to single chain antibody molecules (scFvs) derived, preferably, from the variable heavy CDR3 region that immunospecifically bind to a polypeptide, or fragment thereof, of either human, murine, rat or monkey BLyS. The present invention refers to the use of such antibodies in various methods for the detection, diagnosis and prognosis of diseases related to the aberrant expression or inappropriate function of BLyS or its receptor. As such, these compositions are useful for identifying immune disorders such, these compositions are useful for identifying immune disorders including myasthenia gravis and multiple sclerosis, inflammatory diseases such and proliferative disorders including leukaemia, carcinoma and

              This sequence is that of complementarity determining region 2 (CDR2) of the heavy chain of an anti-tumour necrosis factor (TNF) antibody. The invention provides isolated human, primate, rodent, mammalian, chimeric, humanised and/or CDR-grafted anti-TNF antibodies, immunoglobulins, cleavage products and other specified portions and variants, as well as anti-TNF antibody compositions, encoding or complementary nucleic acids, vectors, host cells, compositions, formulations, devices, transgenic animals, transgenic plants, and methods of making and using them. The anti-TNF antibody comprises at least a portion of an immunoglobulin molecule, especially the heavy chain and/or light chain variable regions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        lymphoma. Accordingly, they can be described as exhibiting various activities such as antirheumatic, antiarthritic, neuroprotective, antiinflammatory, antiasthmatic, antiallergic and cytostatic. This polypeptide sequence is a single chain antibody that binds BLyS of the invention. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format the printed specification, but was obtained in electronic format directely from WIPO at ftp.wipo.int/pub/published pct_sequences.
                                                                                                                                                                                                                                     Novel isolated mammalian anti-tumor necrosis factor antibody, useful for treating sickle cell anemia, diabetes, atherosclerosis, restenosis, angina pectoris, myocardial infarction, leprosy.
                                                                                                                                                                                                                                                                                                                                                                                                                            07-AUG-2000; 2000US-0223360P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAM51158-60) or all of the CDRs of the light chain (see AAM51161-63). The antibody may inhibit TNF-induced cell adhesion molecules, inhibit TNF binding to receptor, or provide Arthritic Index improvement in a mouse model. It is useful for diagnosing or treating a TNF related condition in a cell, tissue, organ or animal (claimed) such as rheumatoid arthritis, gastric ulcer, asthma, allergic rhinitis, Crohn's pathology, sickle cell anaemia, diabetes, a cardiovascular disease such as arteriosclerosis, atherosclerosis, restenosis, angina pectoris or myocardial infarction, an infectious disease in a cell such as bacterial viral, and fungal infections, pneumonia, leprosy and malaria, a malignant disease such as leukaemia, chronic myelocytic leukaemia, Burkitt's lymphoma and multiple myeloma, or a neurological disease such as multiple sclerosis, participal disease, spinal ataxia, Alzheimer's disease and Creutzfeldt-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Homo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                blood platelet membrane protein; predisposition; prevention; treatment; autoimmune thrombocytopaenic purpura; AITP; fibrinogen binding; thrombithrombocyte; cardiac infarction; pulmonary embolism; heavy chain.

This invention describes novel nucleic acid fragments that encode human auto-antibodies and anti-idiotypic antibodies against blood platelet membrane protein, GPIIb/IIIa. The products of the invention are used for diagnosis (including monitoring and determining predisposition), prevention and treatment of autoimmune thrombocytopaenic purpura (AITP) and also for modulating binding offstrinogen to thrombocytes (particularly to dissolve thrombi and/or prevent their formation, e.g. cases of cardiac infarction or pulmonary embolism). Unlike murine

          This sequence represents a complementarity determining region 2 (CDR2) of CC the heavy chain variable domain of a human anti-factor IX/IXa Gla domain CC antibody. Factor IXa is a vitamin K dependent plasma serine protease that CC participates in the blood coagulation pathways. The Gla domain of factor CC IXa and its zymogen factor IX contains important structural determinants CC for interaction with high affinity binding sites on vascular endothelial CC cells and platelets. Compositions comprising the antibodies are used for the treatment or prophylaxis of thrombotic or coagulopathic diseases or CC disorders in a mammal for which inhibiting a FIX/IXa mediated event is indicated, e.g. deep venous thrombosis, arterial thrombosis, unstable CC angina, post myocardial infarction, post surgical thrombosis, coronary CC artery bypass graft (CABG), percutaneous transluminal coronary CC artery bypass graft (CABG), percutaneous transluminal coronary CC angioplasty (PTCA), stroke, thmour growth, invasion or metastasis, inflammation, septic shock, hypotension, adult respiratory distress Syndrome (ARDS), arterial fibrillation and disseminated intravascular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  문

                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to the use of heavy or light chains or their functional derivatives or fragments, having specific CDR (complementarity determining region) sequences of antibodies. The peptides can be used for the combined inhibition of the binding of fibrinogen to thrombocytes and of vitronectin to endothelial cells, the inhibition of angiogenesis, the inhibition of tumour metastasis and/or the inhibition of intimal hyperplasia after vascular injury. They are useful for prevention and treatment of vascular occlusion and for treatment to the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invention of the invent

                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention relates to a novel antibody or antigen binding domain, or its fragment, variant or derivative, which binds to an interferon-gamma (INF-gamma) protein, and is an antiagonist antibody. The invention may be useful for the development of compounds with an antiinflammatory or immunosuppressive activity through action as interferon-gamma agonists. A composition containing the antibody is useful for preventing or treating an autoimmune disease and an inflammatory condition. The present sequence is that of a peptide which represents a complimentarity determining region (CDR) of a human IFN-gamma antibody which may be part of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New antibody or antigen binding domain, or its fragment, variant on derivative, which binds to an interferon-gamma protein, useful for preparing a composition for preventing or treating inflammatory or autoimmune disorders.

                                                                                                                                                              antiparasitic, immunosuppressive or antiarthritic activity. In addition, the sequences disclosed may be useful for gene therapy. The fusion protein is useful for preparing a composition for treating a disease or disease symptom in a patient for example septic shock, endotoxic shock, cachexia syndromes associated with bacterial, viral or parasitic infections, neoplasm, autoimmune disease, arthritis or adverse effects associated with treatment for preventing graft rejection. The present sequence is that of a CDR 2 peptide which was used in the exemplification
                                                                                                                                                                                                                                                                                       This invention relates to a novel fusion protein which comprises a transferrin protein exhibiting reduced glycosylation fused to at lone antibody variable region. The invention may be useful for the development of compounds with cycostatic, antibacterial, virucide,
                                                                                                                                                                                                                                                                                                                                                                                                               New fusion protein comprising a transferrin protein exhibiting reduced glycosylation fused to at least one antibody variable region, useful figreparing a composition for treating e.g., septic shock, neoplasm or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       30-AUG-2001; 2001US-0315745P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention comprises a human monoclonal antibody that binds to phospholipase A2 (PLA2). The monoclonal antibody of the invention is useful in the preparation of a medicament for the treatment of inflammatory and degenerative disorders stemming from inflammatory reactions in the joints, skin, and blood vessels, arthritis, psoriasis, asthma, Alzheimer's disease, atherosclerosis, and restenosis. The present amino acid sequence represents a human PLA2-specific monoclonal antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New human monoclonal antibody that binds to phospholipase A2 useful for treating inflammatory conditions, e.g. arthritis, asthma, Alzheimer's disease, atherosclerosis, or restenosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Landes

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to human antibodies, or their antigen-binding fragments, that selectively bind to a human interleukin-21 receptor (IL-21R). The antibodies of the invention are referred to as MUF, MUF-germline, MU11, 18G4, 18A5, 19F5, CF5G2 and R18. The antibodies selectively bind the extracellular domain of human IL-21R, or inhibit the binding of IL-21 to an IL-21R. Pharmaceutical compositions comprising an antibody or fragment of the invention are useful for diagnosing, preventing or treating autoimmune disorders (e.g. rheumatoid arthritis,
                             Claim 5;
                                                       New composition comprising a multimeric form of an antibody which specifically binds an antigen-presenting portion of a useful for treating pathogen-associated diseases e.g., HIV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  inflammatory bowel disease, Crohn's disease, transplant rejection or psoriasis) or hyperproliferative disorders. The present sequence is an anti-IL-21R antibody heavy chain complementarity determining region of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC or a dendritic cell. The composition-of-matter further comprises a CC detectable moiety attached to the antibody or antibody fragment. The CC detectable moiety is a recognition sequence of a biotin protein ligase, a CC biotin molecule, a streptavidin molecule, a fluorophore, an enzyme or a CC polyhistidine tag. The biotin protein ligase is BirA, the fluorophore is phycoerythrin, and the enzyme is horseradish peroxidase. The toxin is CC phycoerythrin, and the enzyme is horseradish peroxidase. The toxin is Pseudomonas exotoxin A or its portion, which is a translocation domain CC and/or an ADP ribosylation domain. The human antigen-presenting molecule is a major histocompatibility complex (MHC), preferably MHC class I CC molecule, more preferably HLA-AZ molecule. The pathogen is virus-1. CC preferably a retrovirus, more preferably human T lymphotropic virus-1. CC preferably a retrovirus, more preferably human T lymphotropic virus-1. CC presenting molecule and is a polypeptide selected from a segment of a composition comprising as an active ingredient the composition-of-matter is useful in a method for treating a disease associated with a pathogen control of the composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition composition co

The target cell is a T lymphocyte or an antigen-presenting cell, which is a B cell or a dendritic cell The composition of matter further comprises a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       protozoans. The composition-of-matter or the methods are useful for diagnosing an infection by a pathogen in an individual and for killing or damaging a target cell expressing or displaying an antigen-presenting portion of a complex composed of a human antigen-presenting molecule and an antigen derived from a pathogen. A phage displayed library of human rab antibodies which recognise an HLA-A2/Tax 11-19 complex was generated and tested for specific binding to HLA-A2/Tax 11-19, individual clones were then sequenced and their CDR (complementarity determining region) sequences compared. The present sequence is a CDR from the heavy chain of
Antibody; Fab; HLA-A2; Tax 11-19; human leukocyte antigen; antigen; T lymphocyte; antigen-presenting cell; B cell; dendritic cell;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          region capable of specifically complex composed of a human ant derived from a pathogen. New composition comprising a multimeric form of an antibody which specifically binds an antigen-presenting portion of a useful for treating pathogen-associated diseases e.g., HIV. or fragment complex,

Claim 5; SEQ ID NO 51; 68pp; English.

(Composed of a human antigen-presenting molecule and an antigen derived (composed of a human antigen-presenting in a biological sample an antigen-presenting portion of detecting in a biological sample an cantigen-presenting portion of a complex as described above. The target cell is a T lymphocyte or an antigen-presenting cell, which is a B cell cor a dendritic cell. The composition-of-matter further comprises a detectable moiety attached to the antibody or antibody fragment. The composition sequence of a biotin protein ligase, a biotin molecule, a streptavidin molecule, a fluorophore, an enzyme or a copylistidine tag. The biotin protein ligase is BirA, the fluorophore is phycoerythrin, and the enzyme is horseradish peroxidase. The toxin is complycoerythrin, and the enzyme is horseradish peroxidase. The toxin is cand/or an App ribosylation domain. The human antigen-presenting molecule is a major histocompatibility complex (MHC), preferably MHC class I complexule, more preferably HLA-A2 molecule. The pathogen is viral, cor presenting molecule and is a polypeptide selected from a segment of a circle for antigen derived from a pathogen is restricted by the antigen-presention. cc comprising a nucleic acid sequence encoding an antibody fragment (the cantibody fragment including an antigen-braiding region capable of competitionally binding an antigen-presenting portion of a complex composed of a human antigen-presenting molecule and an antigen derived from a company of a nucleic acid construct comprising the isolated polynucleotide has a promoter sequence for directing transcription of the isolated polynucleotide in a host cell, a host cell comprising the nucleic acid construct above, a host virus comprising the nucleic acid construct above, a host virus comprising the nucleic acid construct above, a host virus comprising the nucleic acid construct above, a host virus comprising the nucleic cald construct above, a virus comprising a coat protein fused to the article of a human antigen-presenting portion of a complex composed of a human antigen-presenting molecule and an antigen derived from a pathogen, a method of diagnosing an infection by a pathogen in an information of a complex composed of a human antigen-presenting portion of a complex composed of a human antigen-presenting molecule and an antigen derived composed of a human antigen-presenting molecule and an antigen derived composed of a human antigen-presenting molecule and an antigen derived composed of a human antigen-presenting molecule and an antigen derived composed of a human antigen-presenting molecule and an antigen derived composed of a human antigen-presenting molecule and an antigen derived composed of a human antigen-presenting molecule and an antigen derived composed of a human antigen-presenting molecule and an antigen derived composed of a human antigen-presenting molecule and an antigen derived composed of a human antigen-presenting molecule and an antigen-presenting molecule and an antigen derived composed of a human antigen-presenting molecule and an antigen derived composed of a human antigen human antigen human antigen human antigen human antigen human antigen human antigen human antigen human antigen human a presenting molecule and is a polypeprine percent. Intermaceutical viral oncoprotein or a segment of a Tax protein. A parmaceutical composition comprising as an active ingredient the composition-of-matter composition comprising as an active ingredient the composition-of-matter is useful in a method for treating a disease associated with a pathogen is useful in a method for treating a disease associated with a pathogen is useful in a method for treating a disease associated with a pathogen is useful in a method for treating a disease associated with a pathogen is useful in a method for treating a disease associated with a pathogen is useful in a method for treating a disease associated with a pathogen is useful. damaging a target cell expressing or displaying an antigen-presenting portion of a complex composed of a human antigen-presenting molecule an antigen derived from a pathogen. A phage displayed library of human in an individual such as viruses (HIV), mycoplasmas, bacteria, protozoans. The composition-of-matter or the methods are useful diagnosing an infection by a pathogen in an individual and for complex composed of a human antigen-presenting molecule and an f) an antibody or antibody fragment including an antige capable of specifically binding an antigen-presenting from a pathogen. Also included are an isolated polynucleotide relates to a composition-of-matter comprising including an antigen-binding (a multimeric antigen

New composition comprising a multimeric form of an antibody or fragment which specifically binds an antigen-presenting portion of a complex, useful for treating pathogen-associated dispages of urv

```
cc complex composed of a human antigen-presenting molecule and an antigen comprising a nucleic acid sequence encoding an antibody fragment (the antibody fragment including an antigen-presenting molecule and an antigen present and an antigen present and the specifically binding an antigen-presenting molecule and an antigen present (the antibody fragment (the capable of specifically binding an antigen-presenting molecule and an antigen derived from a pathogen), a nucleic acid construct comprising the isolated polynucleotide in a host cell), a host cell comprising the nucleic acid construct above, a host virus comprising the nucleic antibody fragment, detecting an antigen-presenting portion of a complex composed of a human antigen-presenting molecule and an antigen derived from a pathogen, a method of diagnosing an target cell complex (composed of a human antigen-presenting molecule and an antigen derived cromposed of a human antigen-presenting molecule and an antigen antigen-presenting cell, which is a pathogen in an antigen-presenting cell, which is a pathogen in an antigen-presenting molecule and an antigen derived (composed of a human antigen-presenting molecule and an antigen are cell or a dendritic cell. The composition of a complex (composed of a human antigen-presenting molecule and an antigen are cell or a dendritic cell. The composition of a complex as described above. The target cell is a Tymphocyte or an antigen-presenting cell, which is a cell or a dendritic cell. The composition of a complex as described above. The target cell or a dendritic cell. The composition sequence of a biotin protein ligase, a biotin molecule, as erreptavidin molecule, a fluorophore, an enzyme or a polyhistidine tag. The biotin protein ligase is biotin protein ligase, a biotin molecule, more preferably HLA-Az molecule. The pathogen is restricted by cit antigen-presenting molecule and is a polypeptide selected by cit antigen-presenting molecule and is a polypeptide selected by cit antigen-presenting cell in an individual molec

Preparing human binding molecule specifically binding to human CD3 complex, comprises selecting molecules specifically binding to extracellular domain of recombinant epsilon-chain and preparing identified selected binding molecule.

Claim 27; SEQ ID NO 6; 350pp; English.

The invention relates to a method of preparing a human binding molecule, complex. The method comprises selecting molecules specifically binds to the human CD3 cc or interacting with the extracellular domain of recombinant epsilon-chain cc expressed independent of the human CD3 complex in the absence of other c emembers of the CD3 complex, from a population of candidate polypeptides encoded by a library, selecting molecules from a population identified in CC the above step for binding to the human CD3 complex, and preparing the selected binding molecule. The binding molecule is an antibody molecule, a cid seclosed is a nucleic acid sequence encoding a human binding molecule, a vector comprising such a nucleic acid, a host transformed or transfected with such a vector, a composition computising a human binding molecule, and optionally a proteinaceous compound capable of providing an activation signal for immune effector cells, and a kit comprising a human binding molecule, and proteinaceous compound capable of providing an human binding molecule, coid sequence chosen from the identified mucleic acid sequence, a nucleic acid sequence chosen from the identified mucleic acid sequence, a nucleic acid sequence which is degenerate as a result of the genetic code to the above mentioned nucleotide sequences. The antibody molecule, antibody fragment or its derivative or construct comprises a further and in a result of the genetic code to the above mentioned nucleotide sequences. The antibody molecule, antibody fragment or its derivative or construct comprises a further and in and in interaction-site is specific for one or more cell surface molecule such as a tumor specific marker. The antigen-interaction-site is further scf antigen-interaction-site and/or a further effector domain, and is humanized and/or deimmunized in an additional step. The further antigenç is further scFv

CC EpCAM, CCR5, CD19, EphA2, HER-2 neu, HER-3, HER-4, EGFR, PSMA, CEA, MUC-1 CC (mucin), MUC2, MUC3, MUC4, MUC5AC, MUC5B, MUC7, betahCG, Lewis Y, CD20, CC CD33, CD30, ganglioside GD3, 9-0-Acetyl-GD3, GM2, Globo H, fucosyl GM1, CC Poly SA, GD2, carboanhydrase IX (MY/CA IX), CD4406, Sonic hedgehog (Shh), CC Mue-1, plasma cell antigen, (membrane-bound) IgE, melanoma chondroitin CC Gusmoglein 4, E-cadherin neoepitope, fetal actylcholine receptor, CD25, CC CA19-9 marker, CA-125 marker and muellerian inhibitory substance (MIS) CC CA19-9 marker, CA-125 marker and muellerian inhibitory substance (MIS) CC CA19-9 marker, CA-125 marker and muellerian inhibitory substance (MIS) CC cativated antigen), endosiallin, EGFRVIII, LG, SAS and CD63. In a human CC derivative or an antibody construct, comprises a heavy chain variable CC (VH) region, a light chain variable (VL) region, complementarity CC determining regions 1-3 (CDR1-3) of a VH-region, and CDR1-3 of a VL-region. The method is useful for preparing a human binding molecule, comprises a heavy chain variable CC region. The human binding molecule polypeptide sequences, and the CD complement or its derivative which specifically binds to the human CD3 complex. The human binding molecule polypeptide sequences, and the CD conformatory disease, immunological disorder, autoimmune disease, ci infectious disease, viral disease, allergic reactions, parasitic CC reactions, graft-versus-host disease, allergic reactions, parasitic creatment or amelioration of the above mentioned disease. This sequence cc represents a CDR region of a human antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     XSSSSSSSSSSSSSSXX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match
The invention relates to a composition comprising an isolated human antibody or its fragment or other variant, where the antibody, the fragment or the other variant specifically binds to an aspartyl (asparaginyl) beta-hydroxylase (AAH). The invention also relates to an isolated nucleic acid molecule comprising a sequence encoding a human antibody or its fragment or other variant, where the antibody, the fragment or the other variant specifically binds to human AAH (HAAH), an expression vector comprising the nucleic acid molecule, a host cell comprising the expression vector, a method of modulating an AAH activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                reducing effect. The invention may be useful for the development of compounds with an antilipemic, nephrotropic, antiarteriosclerotic or cardiant activity acting by binding to (oxidized) low density lipoprotein, so functioning in a manner analogous to the known scavenger pathway. The invention is useful as a hypolipemic agent, for reducing the level of (oxidized) low density lipoprotein, especially cholesterol, in the blood, for example for treating arteriosclerosis (and its sequelae such as cardiac infarct) and for treating kidney disease, particularly glomerulonecrosis. The antibody of the invention avoids the side effects associated with use of inhibitors of key enzymes in cholesterol biosynthesis. The present sequence is that of a CDR peptide derived from the heavy chain of the human SAM-6 antibody of the invention.
                                                                                                                                                                                                                      New composition comprising anti-hydroxylase antibodies, diagnosing or treating cancer, e.g. lung, liver, colon, prostate, ovary, bile duct, brain, or breast cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Antibody therapy; aspartyl (asparaginyl) beta-hydroxylase; AAH; HAAH; cancer; neoplasm; lung tumor; liver tumor; colon tumor; pancreas tumor; prostate tumor; ovary tumor; brain tumor; breast tumor; cytostatic; antibody.
                                                                                                                                                                                      Claim 11; SEQ ID NO 311; 107pp; English.

The present invention relates to a composition-of-matter which comprises an antibody or antibody fragment or a multimeric form of an antibody or antibody fragment including an antigen-binding region capable of specifically binding an antigen-presenting portion of a complex composed of a human antigen-presenting molecule (APM) and an antigen derived from a pathogen. The invention is useful for the specific detection of the antigen-presenting portion of the complex and for diagnosing/treating various types of diseases associated with a pathogen infection by killing/damaging pathogen infected cells. The present sequence is a complementarity determining regions (CDR) of Fab heavy chain antibody specifically binding human leukocyte antigen (HLA-A2)/Tax11-19 complex. Tax11-19 is an antigen derived from Human T-lymphotropic virus 1 (HTLV-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            in a cell, a method of treating a patient who has a cancer associated with overactive or over expressed AAH, a method for identifying an antibody or its fragment or other variant that specifically binds to an AAH and a method of making a human monoclonal antibody or its fragment or other variant that specifically binds to an AAH. The composition, antibody, nucleic acid, kit and methods are useful for diagnosing or treating cancer, where the cancer cell is a tumor cell of the lung, liver, colon, pancreas, prostate, ovary, bile duct, brain or breast. This sequence represents an anti-HAAH antibody complementarity determining region (CDR) used in the scope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New composition-of-matter capable of specifically binding an antigen-presenting molecule and a pathogen-derived antigen complexes, useful for treating diseases associated with a pathogen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 5; SEQ ID NO 51; 65pp; English.

                                                                                                                                                                                                                        The present invention relates to a composition-of-matter which comprises an antibody or antibody fragment or a multimeric form of an antibody or antibody fragment including an antigen-binding region capable of specifically binding an antigen-presenting portion of a complex composed of a human antigen-presenting molecule (APM) and an antigen derived from a pathogen. The invention is useful for the specific detection of the antigen-presenting portion of the complex and for diagnosing/treating various types of diseases associated with a pathogen infection by killing/damaging pathogen infected cells. The present sequence is a complementarity determining regions (CDR) of Fab heavy chain antibody specifically binding human leukocyte antigen (HLA-A2)/Tax11-19 complex. Tax11-19 is an antigen derived from Human T-lymphotropic virus 1 (HTLV-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to a composition-of-matter which comprises an antibody or antibody fragment or a multimeric form of an antibody or antibody fragment or a multimeric form of an antibody or antibody or antibody or antibody or antibody or antibody fragment including an antigen-binding region capable of specifically binding an antigen-presenting portion of a complex composed of a human antigen-presenting molecule (APM) and an antigen derived from a pathogen. The invention is useful for the specific detection of the antigen-presenting portion of the complex and for diagnosing/treating various types of diseases associated with a pathogen infection by killing/damaging pathogen infected cells. The present sequence is a complementarity determining regions (CDR) of Fab heavy chain antibody specifically binding human leukocyte antigen (HLA-A2)/Tax11-19 complex. Tax11-19 is an antigen derived from Human T-lymphotropic virus 1 (HTLV-1)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a composition-of-matter which comprises an antibody crantibody fragment or a multimeric form of an antibody or antibody fragment or a multimeric form of an antibody or antibody fragment including an antigen-binding region capable of specifically binding an antigen-presenting portion of a complex composed of a human antigen-presenting molecule (APM) and an antigen derived from a pathogen. The invention is useful for the specific detection of the antigen-presenting portion of the complex and for diagnosing/treating various types of diseases associated with a pathogen infection by killing/damaging pathogen infected cells. The present sequence is a complementarity determining regions (CDR) of Fab heavy chain antibody specifically binding human leukocyte antigen (HLA-A2)/Tax11-19 complex. Tax11-19 is an antigen derived from Human T-lymphotropic virus 1 (HTLV-
WPI; 2004-348433/32.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            methods of modulating or activating an endogenous activity of a human EPO Creceptor in a mammal, comprising administering to the mammal a therapeutic amount of the above antibody or its fragment to modulate or activate the receptor; (2) a method of treating a mammal suffering from CC the above antibody or its fragment to modulate or activate the receptor; (3) a pharmaceutical composition comprising a therapeutic amount of the above antibody or intified polynucleotides equence, and their fragments; (4) can be and degenerate codon equivalents; and (5) an isolated and purified polynucleotides equence, and their fragments, complements and degenerate codon equivalents; and (5) an isolated and purified amtinaemic, neuroprotective and vulnerary activities, and can be used in gene therapy. The compositions and methods from the present invention can be used for modulating an endogenous activities, and can be used in gene therapy. The compositions and methods from the present invention can be used for identifying mammals buffering cativity of a human EPO receptor or for treating mammals suffering from CC activity of a human EPO receptor. The composition may also be used in gromoting wound healing or in protecting against neural cell and/or tissue damage resulting from brain/spinal cord injury, stroke and the Clike. The present sequence represents a human anti-EPO-R antibody heavy cives in the exemplification of the resent invention (CDR), which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated antibody that specifically binds to CC an epitope specifically bound by an antibody expressed by a clone such as CC clone 525, C25, C39, 1C6 and clone 1F3, where the antibody binds to and CC neutralises botulinum neurotoxin type A (BoNT/A). Also included are a CC which is specifically bound by the antibody, where the polypeptide is not CC aftill-length botulinum neurotoxin H c fragment and making an anti-BoNT/A CC antibody that neutralises BoNT/A (by contacting several antibodies with CC an epitope specifically bound by an antibody expressed by any of the convel clones and isolating an antibody that specifically binds to the CC epitope). The antibody is useful for neutralising a BoNT/A, by contacting chair variable region complementarity determining region) and with a second anti-BoNT/A antibody which comprises a VH CDR, where the second CC antibody. The antibody which comprises a VH CDR, where the second CC antibody. The antibody is useful in the treatment of pathologies associated with botulinum neurotoxin poisoning, for rapid caseociated with botulinum neurotoxin poisoning, for rapid CC detection/diagnosis of botulism and in the detection and/or quantification of BoNT/A in a biological sample obtained from an organism. The present sequence is a heavy chain variable region (VH) of a single chain antibody (scFV) of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches

Also described: (1) a hybridoma cell line with DSMZ accession number DSM ACC2625; (2) an anti-idiotype antibody expressed by the hybridoma cell line; (3) a humanized antibody having the binding specificity of the anti-idiotype antibody of (2); (4) generating an immune response in a mammal against the anti-idiotype antibody; and (5) producing an anti-idiotype antibody in a non-human mammal. The antibody, composition and method are useful for diagnosing, detecting, monitoring, and treating neoplasms. The present sequence represents the human immunoglobulin (19) germ line heavy chain variable region, which is given in comparison with the human monoclonal antibody heavy chain variable region in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New anti-idiotype antibody of the human monoclonal antibody SC-1, useful for diagnosing, detecting, monitoring, and treating neoplasms.
                                                                                                                                                                                                                                                                                                                                                                       Human; immunoglobulin; Ig; transgenic; non-human mammal; inactivated endogenous Ig locus; B-cell development;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated anti-idiotype antibody, which specifically binds a polypeptide comprising the SC-1 human monoclonal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                transgenic Xenomice, created using the method of the invention. The specifications describes a transgenic non-human mammal which has genome modifications that comprise an inactivated endogenous immunoglobulin (Ig) locus, so that the mammal does not display normal B-cell development. The modified genome also has an inserted human heavy chain Ig locus in germline configuration, the human heavy chain Ig locus comprising a human inserted human later constant region and regulatory and switch sequences, human J-H genes, human D-H genes, and human V-H genes and an inserted human kappa ight chain Ig locus in germline configuration, the human kappa light chain Ig locus comprising a human kappa constant region, J-kappa genes, where the number of V-H and V-kappa genes inserted are selected to restore normal B-cell development in the mammal. The transgenic animals have a near complete human Ig locus, including both a human heavy chain locus and a human kappa light chain locus. They can be used for the production of human antibodies when exposed to particular antigens e.g. when exposed to human 11-8, EGFR or TNF- alpha the mice will produce antibodies to IL-8, EGFR or TNF- alpha respectively
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention relates to a new human antibody specific for human CC interleukin-12 (II-12). The invention also includes antigen binding CC portions that bind to II-12. Sequences AAB39485-B39516 represent human CC anti-II-12 antibody heavy and light chain complementarity determining CC region (CDR) amino acid sequences, and also includes variable region CC amino acid sequences. Other variable region amino acid sequences are CC given in AAB39517-B39500 and AAB40068-B40149. Sequences, AAB39772-B40063 represent anti-II-12 CDR3 related amino acid sequences, AAB39772-B40063 represent other CDR sequences. Light chain CDR3 consensus sequences are CC given in AAB40064-B40067. Primers used in the identification and CC construction of the antibodies of the invention are given in AAC61062-CC C61071. The antibody of the invention is a neutralising antibody and has CC construction; antiarthritic; antiasthmatic; antiaflammatory; CC neuroprotective; antiaptoriatic; antiasthmatic; cardiant, antiparasitic; antibacterial and immunosuppressive activity. The antibodies or antigency in the treatment of disorders associated CC with detrimental release of human II-12, especially Crohn's disease, CC multiple sclerosis and rheumatoid arthritis. They can also be used in the CC disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

It may be used as part of a method of producing chimeric mouse-human antibodies or fragments which have the same binding specificity as a parent Ab but have increased human characteristics, preventing anti-globulin response in humans. (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention describes a novel polynucleotide (I) (and complements and hybridizable polynucleotides) comprising a contiguous nucleotide sequence coding for a human antibody with factor VIII specificity which has hemostatic activity. (I) is useful a primer or probe for detecting the presence of inhibitory antibodies directed against factor VIII. The polypeptides of the invention and the antibodies generated from them are useful in compositions for neutralizing factor VIII inhibiting antibodies in hemophila A patients. This sequence represents the human factor VIII antibidy A3-C1 specific scFv protein DP-49 which is used in the method of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention relates to a new human antibody specific for human CC interleukin-12 (IL-12). The invention also includes antigen binding CC portions that bind to IL-12. Sequences AAB39485-B39516 represent human CC anti-IL-12 antibody heavy and light chain complementarity determining CC region (CDR) amino acid sequences, and also includes variable region CC amino acid sequences. Other variable region amino acid sequences are CC given in AAB39517-B39560 and AAB40068-B40149. Sequences AAB39771 CC represent other CDR sequences. Light chain CDR3 consensus sequences are CC given in AAB40067. Primers used in the identification and CC construction of the antibodies of the invention are given in AAC61062-CC (C61071. The antibody of the invention is a neutralising antibody and has CC entroprotective; antiarthritic; antiasthmatic; cardiant; antiparasitic; neutroprotective; antisporiatic; antiasthmatic; cardiant; antiparasitic; outlands are useful in the tratment of disorders associated CC with detrimental release of human IL-12, especially Crobn's disease, CC multiple sclerosis and rheumatoid arthritis. They can also be used in the disorders.

The invention also includes antigen binding portions that bind to II-12. Sequences AAB3945-B39516 represent human CC anti-II-12 antibody heavy and light chain complementarity determining CC region (CDR) amino acid sequences, and also includes variable region CC amino acid sequences. Other variable region amino acid sequences are CC given in AAB39517-B39560 and AAB40068-B40149. Sequences, AAB39772-B40063 represent anti-II-12 CDR3 related amino acid sequences, AAB39772-B40063 crepresent other CDR sequences. Light chain CDR3 consensus sequences are CC given in AAB40064 B40067, Primers used in the identification and CC construction of the antibodies of the invention are given in AAC61062-CC (S1071. The antibody of the invention is a neutralising antibody and has CC construction and immunosuppressive activity. The antibodies or antigence in the consensus are useful in the treatment of disorders associated CC with detrimental release of human II-12, especially Crohn's disease, consensus and rheumatoid arthritis. They can also be used in the CC disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention relates to a new human antibody specific for human CC interleukin-12 (IL-12). The invention also includes antigen binding CC portions that bind to IL-12. Sequences AAB3945-B39516 represent human CC anti-IL-12 antibody heavy and light chain complementarity determining CC amino acid sequences. Other variable region acid sequences are CC given in AAB39517-B39560 and AAB40068-B40149. Sequences AAB39772-B40063 CC represent anti-IL-12 CDR3 related amino acid sequences AAB39772-B40063 CC represent other CDR sequences. Light chain CDR3 consensus sequences are CC given in AAB40064-B40067. Primers used in the identification and CC construction of the antibodies of the invention are given in AAC61062-CC C61071. The antibody of the invention is a neutralising antibody and has CC constructive; antisportatic; antisclerotic; antiinflammatory; CC neuroprotective; antipsoriatic; antisclerotic; antiinflammatory; CC neuroprotective; antipsoriatic; antisethmatic; cardiant; antiparasitic; CC intibacterial and immunosuppressive activity. The antibodies or antigency binding fragments are usefil in the treatment of disorders associated CC with detrimental release of human IL-12, especially Crohn's disease, CC multiple sclerosis and rheumatoid arthritis. They can also be used in the manufacture of a pharmaceutical composition to treat human IL-12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

This invention relates to a new human antibody specific for human CC interleukin-12 (IL-12). The invention also includes antigen binding CC portions that bind to IL-12. Sequences AAB39485-B3516 represent human CC anti-IL-12 antibody heavy and light chain complementarity determining CC region (CDR) amino acid sequences, and also includes variable region CC amino acid sequences. Other variable region amino acid sequences are CC given in AAB39517-B39560 and AAB40068-B40149. Sequences AAB39772-B40063 represent anti-IL-12 CDR3 related amino acid sequences, AAB39772-B40063 CC represent other CDR sequences. Light chain CDR3 consensus sequences are CC given in AAB40064-B40067. Primers used in the identification and CC construction of the antibodies of the invention are given in AAC61062-CC G1071. The antibody of the invention is a neutralising antibody and has CC construction and immunosuppressive activity. The antibodies or antigences in the treatment of disorders associated CC with detrimental release of human IL-12, especially Crohn's disease, CC multiple sclerosis and rheumatoid arthritis. They can also be used in the manufacture of a pharmaceutical composition to treat human II-12 disease in the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consensus and the consen

CC anti-II-12 antibody heavy and light chain complementarity determining CC region (CDR) amino acid sequences, and also includes variable region CC amino acid sequences. Other variable region amino acid sequences are CC given in ABB39517-B39500 and ABB40068-B40149. Sequences ABB3951-B39771 CC represent anti-II-12 CDR3 related amino acid sequences, ABB39772-B40063 Crepresent other CDR sequences. Light chain CDR3 consensus sequences are CC given in ABB40064-B40067, Primers used in the identification and CC construction of the antibodies of the invention are given in AAC61062-CC (C61071. The antibody of the invention is a neutralising antibody and has CC central and immunosuppressive activity. The antibodies or antiparasitic; antiarclaration is a natinflammatory; CC antibacterial and immunosuppressive activity. The antibodies or antigence continuous fragments are useful in the treatment of disorders associated CC with detrimental release of human II-12, especially Crohn's disease, CC multiple sclerosis and rheumatoral components. They can also be used in the CC maniferture of a pharmacent call components can also be used in the CC maniferture of a pharmacent call components.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention relates to a new human antibody specific for human interleukin-12 (IL-12). The invention also includes antigen binding portions that bind to IL-12. Sequences AAB39485-B39516 represent human anti-IL-12 antibody heavy and light chain complementaries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New human antibody specific for human interleukin-12 (IL-12) used treat disorders characterized by aberrant IL-12 expression e.g. Codisease and multiple sclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Page 121; 377pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Crohn's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ő

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC This invention relates to a new human antibody specific for human CC interleukin-12 (IL-12). The invention also includes antigen binding CC portions that bind to IL-12. Sequences AAB39485-B39516 represent human CC anti-IL-12 antibody heavy and light chain complementarity determining CC region (CDR) amino acid sequences, and also includes variable region CC amino acid sequences. Other variable region amino acid sequences are CC given in AAB39517-B39560 and AAB40068-B40149. Sequences AAB39517-B39771 CC represent anti-IL-12 CDR3 related amino acid sequences, AAB39772-B40063 CC represent other CDR sequences. Light chain CDR3 consensus sequences are CC given in AAB40064-B40067. Primers used in the identification and CC construction of the antibodies of the invention are given in AAC61062-CC (C61071. The antibody of the invention is a neutralising antibody and has CC constructive; antiarthritic; antiasthmatic; cardiant; antiparasitic; CC neuroprotective; antiaptoriatic; antiasthmatic; cardiant; antiparasitic; contibuted and immunosuppressive activity. The antibodies or antigency binding fragmental release of human IL-12, especially Crobin's disease, CC multiple sclerosis and rheumatoid arthritis. They can also be used in the createnest of discreters disease, CC manufacture of a pharmaceutical composition to treat human IL-12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC This invention relates to a new human antibody specific for human CC interleukin-12 (IL-12). The invention also includes antigen binding portions that bind to IL-12. Sequences AAB39485-B39516 represent human CC anti-IL-12 antibody heavy and light chain complementarity determining Cregion (CDR) amino acid sequences, or also includes variable region CC amino acid sequences. Other variable region amino acid sequences are given in AAB39517-B39510 and AAB400088-B40149. Sequences AAB39771 CC represent other CDR sequences. Light chain CDR3 consensus sequences are Given in AAB40064-B40067. Primers used in the identification and CC construction of the antibodies of the invention are given in AAC61062-CC (C61071. The antibody of the invention is a neutralising antibody and has CC construction; antiarthritic; antiasthmatic; cardiant; antiparasitic; antibacterial and immunosuppressive activity. The antibodies or antigence binding fragments are useful in the treatment of disorders associated with detrimental release of human IL-12, especially Cohn's disease, CC multiple sclerosis and rheumatoid arthritis. They can also be used in the disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Best Loc

Claim 75; Page 121; 377pp; English.
XX
This invention relates to a new human antibody specific for human cinterleukin-12 (IL-12). The invention also includes antigen binding control of the bind to IL-12. Sequences AAB39485-899516 represent human cantil for the sequences of the chain complementarity determining region (CR) amino acid sequences. Other variable region amino acid sequences. Other variable region amino acid sequences. Other variable region amino acid sequences. Other variable region amino acid sequences. Other variable region amino acid sequences. Other variable region amino acid sequences. Other variable region amino acid sequences. AAB39517-B39710 crepresent anti-11-12 CDR3 related amino acid sequences. AAB39561-B397110 crepresent anti-11-12 CDR3 related amino acid sequences. AAB39561-B397110 crepresent anti-11-12 CDR3 related amino acid sequences. AAB39761-B397110 crepresent anti-11-12 CDR3 related amino acid sequences are continued amino acid sequences. AAB39761
